What's old is new again: AI is bringing XSS vulnerabilities back to the spotlight

Cross-site scripting vulnerabilities (XSS) have vexed cybersecurity professionals for 30 years. Following a CISA and FBI alert, experts say unless these flaws are fixed soon, AI models may ingest and perpetuate them.

Joe Sullivan

Contributor

Joe Sullivan is a former federal prosecutor and former CSO for Facebook, Uber, and Cloudflare. He currently runs the non-profit Ukraine Friends.

Susan Bradley

Contributing Writer

Susan Bradley has been patching since before the Code Red/Nimda days and remembers exactly where she was when SQL slammer hit (trying to buy something on eBay and wondering why the Internet was so slow). She writes the Patch Watch column for Askwoody.com, is a moderator on the PatchManagement.org listserve, and writes a column of Windows security tips for CSOnline.com. In real life, she's the IT wrangler at her firm, Tamiyasu, Smith, Horn and Braun, where she manages a fleet of Windows servers, Microsoft 365 deployments, Azure instances, desktops, a few Macs, several iPads, a few Surface devices, several iPhones and tries to keep patches up to date on all of them. In addition, she provides forensic computer investigations for the litigation consulting arm of the firm. She blogs at <https://www.askwoody.com/tag/patch-lady-posts/> and is on twitter at @bsdva. She lurks on Twitter and Facebook, so if you are on Facebook with her, she really did read what you posted. She has a SANS/GSEC certification in security and prefers Heavy Duty Reynolds wrap for her tinfoil hat.

Christopher Burgess

Contributing Writer

Christopher Burgess is a writer, speaker and commentator on security issues. He is a former senior security advisor to Cisco, and has also been a CEO/COO with various startups in the data and security spaces. He served 30+ years within the CIA which awarded him the Distinguished Career Intelligence Medal upon his retirement. Cisco gave him a stetson and a bottle of single-barrel Jack upon his retirement. Christopher co-authored the book, "Secrets Stolen, Fortunes Lost, Preventing Intellectual Property Theft and Economic Espionage in the 21st Century". He also founded the non-profit, Senior Online Safety.

in 

Deb Radcliff

Contributing Writer

Deb Radcliff is an investigative journalist and analyst focused on computer crime and security. She is author of the popular cyber thriller series, "Breaking Backbones," available at Amazon.
