# Information Security Management services

FUJITSU

Cost-effective security strategy and operations

The **Information Security Management (ISM) service** is a remote, monthly service provided by Fujitsu's Global Delivery Centers (GDCs) to support organizations in meeting cyber security objectives and contractual obligations.

We also offer a dedicated, client-focused CISO service to support organizations that lack the internal resources to effectively address growing cyber threats, meet regulatory compliance requirements, and enhance their overall security posture.

Core responsibilities ISM:

- Manage: Serve as a point of contact for security, ensure compliance, handle audits, manage risks, improve service, and identify security opportunities.

- Facilitate: Assist in security events, policy compliance, health checks, vulnerability reporting, and change assessments.

Roles and levels: Delivered by junior, regular, or senior ISMs based on project complexity.

CISO services:

- Strategic cyber security leadership aligned with business goals.

- Efficient security operations and reporting.

- Risk management and improvement.

- Regulatory compliance and governance.

- Incident response and crisis management.

Hours: Weekdays, 9:00–17:00 (local time).

Key attributes delivered:

Risk management

Information Security Management system

Regulatory compliance and assurance support

Governance, risk and compliance support

Vulnerability management liaison

Incident response support

Why Fujitsu?

Global scale and reach
